Cadence Selects OMS SafeHarbor to Provide their Global Release Management System; RESCUE Allows Cadence to Automate Business Processes for Product Release and Production

LOWELL, Mass. -- OMS SafeHarbor, Inc., a leading supplier of digital product lifecycle management (DPLM) and electronic software delivery (ESD) solutions, today announced that Cadence Design Systems, Inc., (NASDAQ: CDNS), (<http://www.cadence.com>), the largest and most comprehensive provider of electronic design automation (EDA) software, hardware and services, has selected OMS SafeHarbor to provide a Global Release Management System that automates the business processes around product release and production.

OMS SafeHarbor's RESCUE solution streamlines the Cadence internal software release process and provides a secure central repository for digital assets. RESCUE allows Cadence to configure software bill-of-materials within the application and assign component-specific due dates. The solution's permission-and status-based software architecture controls access to individual digital assets and provides status updates on each component. RESCUE eliminates the need for physical CD masters and documentation to be mailed throughout an organization, since all files can be delivered electronically. All the metrics in the product release process are reportable and auditable.

"We selected OMS SafeHarbor because of their comprehensive software product release solution," said, Robert Stear, Vice President of Operations, Central Operations Management at Cadence. "OMS SafeHarbor will help us bring our products to market faster while maintaining our high quality standards by streamlining the way we release our products."

"The OMS SafeHarbor platform provides the opportunity for a rapid return on investment for Cadence Design Systems on a number of fronts," said Keith Caveney, President and Chief Executive Officer of OMS SafeHarbor, Inc. "Cadence's digital assets are now in a secure, organized, and accessible digital repository. The Cadence product development, release engineering and manufacturing groups will see productivity gains since component information is available digitally across organizations."

About OMS SafeHarbor

OMS SafeHarbor offers solutions and services that provide software publishers with an efficient and auditable workflow process to digitally assemble, present, entitle, and deliver their licenses and products. OMS SafeHarbor customers decrease their time to market and cost of goods sold, and also increase customer satisfaction and visibility of customer activity.
